

Oil & Gas
Authority

Reserves and Resources

This section will appear for all fields that have not yet ceased production.

If you think there are any errors with allocation please contact stewardshipsurvey@ogauthority.co.uk

The UKSS 2020 survey will **open on Friday 30th October 2020** and will **close on Friday 26th February 2021**.
As in previous years the Activity section will close on Friday 15th January 2021.

UKSS 2020 Changes

The following changes are being implemented in the Reserves & Resources section of the survey.

1. In the Reservoir details page, you will now be asked more information regarding oil and gas estimates.
 - Values must now be provided for Low (P90) and High (P90) STOIP and GIIP. (Mid (P50) is currently mandatory)
 - You will be asked for the mean STOIP and GIIP
 - A new validation has been added requesting a comment if there is a >10% variance in these values from previous year survey input.
2. All sections have enhanced guidance and explanatory notes

Fluid and drive mechanism details

Fluid type

Terminology:

- Use "Oil" for oil fields with no gas cap.
- Use "Oil & Gas" for oil fields with a gas cap.
- Use "Oil & Condensate" when the field has both oil bearing and condensate bearing reservoirs, and oil is the larger portion of hydrocarbons in place.
- Use "Condensate & Oil" when the field has both oil bearing and condensate bearing reservoirs, and condensate is the larger portion of hydrocarbons in place.

Current drive mechanism

Terminology:

- Depletion includes solution gas drive and gas cap drive (in oil fields with no or limited aquifer support).
- Water and gas injection includes both WAG and water injection in one part and gas injection in another (as these are both pressure support mechanisms).
- "Combined" should be selected if different drive mechanisms are being employed in different parts of the field (either by fault panel or by reservoir/layer) e.g. injection for pressure support in one area and depletion in another.

Reservoir Details

Fluid and drive mechanism

Fluid type

Use "Oil" for oil fields with no gas cap.

Use "Oil & Gas" for oil fields with a gas cap.

Use "Oil & Condensate" when the field has both oil bearing and condensate bearing reservoirs, and oil is the larger portion of hydrocarbons in place.

Use "Condensate & Oil" when the field has both oil bearing and condensate bearing reservoirs, and condensate is the larger portion of hydrocarbons in place.

Current drive mechanism

Depletion includes solution gas drive and gas cap drive (in oil fields with no or limited aquifer support).

Water and gas injection includes both WAG and water injection in one part and gas injection in another (as these are both pressure support mechanisms).

"Combined" should be selected if different drive mechanisms are being employed in different parts of the field (either by fault panel or by reservoir/layer) e.g. injection for pressure support in one area and depletion in another.

Options for 'Fluid type': **Oil; Dry Gas; Oil & Gas; Condensate; Oil & Condensate; Condensate & Oil**

Options for 'Current drive mechanism': **Depletion; Water Injection; Gas Injection; Water & Gas Injection; Aquifer Support; Combined; Other**

Current estimate of
STOIIP (black oil)

	Previous year (mmbbls)	Current year (mmbbls)
Low (P90)	<input type="text"/>	<input type="text" value="10"/>
Mid (P50)	<input type="text"/>	<input type="text" value="20"/>
High (P10)	<input type="text"/>	<input type="text" value="90"/>
Mean	<input type="text"/>	<input type="text" value="22"/>

that will help in the
understanding of these
STOIIP estimates
optional

Current estimate of GIIP
(free gas)

	Previous year (bcf)	Current year (bcf)
Low (P90)	<input type="text"/>	<input type="text" value="0"/>
Mid (P50)	<input type="text"/>	<input type="text" value="0"/>
High (P10)	<input type="text"/>	<input type="text" value="0"/>
Mean	<input type="text"/>	<input type="text" value="0.1"/>

Please provide any
additional information
that will help in the
understanding of these
GIIP estimates
optional

For example, are they static (ie based on mapping) or
dynamic (eg from the P/Z plot)

Reservoir Details

Oil and gas estimates

The current estimates of low, mid, high and mean in-place volumes are mandatory.
Please use the most recent available values.

Estimates.

It is now required to provide data for P90 and P10 values. [\(UKSS 2020 Change\)](#)

Validations

You must provide a comment if your P50 is the same as your MEAN value.
[\(UKSS 2020 Change\)](#)

 Calculate Differences

Reserves

Previous Year, Current Year

Discovered, remaining reserves that are recoverable and commercial. Can be classed as 1P, 2P or 3P depending on confidence level. Unsanctioned Discovery Volumes aren't being captured in the 2020 survey.

Reserves confidence levels

1P Reserves that on the available evidence, are virtually certain to be technically and commercially producible, i.e. have a better than 90% chance of being produced.

2P Reserves that are not yet regarded as 1P, but which are estimated to have a better than 50% chance of being technically and commercially producible.

3P Reserves that at present cannot be regarded as 2P, but which are estimated to have a significant – more than 10% but less than 50% - chance of being technically and commercially producible.

Activity Section Cross Check Validation

Data from the Activity section of the survey and Reserves & resources section should be consistent. To help achieve this, the Estimate 2P values are cross checked against the Base activity of the most recently submitted version of the Activity section.

Where the Base activity has no non-zero Sales Volume data for a category there should be no non-zero data entered in the Reserves & resources section submission.

The Estimate 2P is compared to the sales volume profile from 2021 to (Likely COP year)

Validation Dependence

Validation for this section is dependent on submission of the Activity section for the same reporting unit

You cannot submit until the dependent section has been submitted.

Please note that previous years data will not be shown if the Asset has changed ownership since the last survey.

Please ensure you provide **Cumulative Production**.

Calculated difference

	Production difference	Difference 1P reserves	Difference 2P reserves	Difference 3P reserves
Oil		+3%	+4%	+5%
	1 mmbbls	3 mmbbls	4 mmbbls	5 mmbbls
Condensate		+3%	+4%	+5%
	1 mmbbls	3 mmbbls	4 mmbbls	5 mmbbls
NGL		+3%	+4%	+5%
	1 mmbbls	3 mmbbls	4 mmbbls	5 mmbbls
Sales Gas		+3%	+4%	+5%
	1 bcf(sales)	3 bcf(sales)	4 bcf(sales)	5 bcf(sales)

Please explain any differences greater than 10% from the previous year
optional

Reserves

Calculated difference

Please provide some context for changes + or - 10% of previous year.

Oil, Condensate and NGL estimates

Small changes of less 0.1 mmbbls that result in a + or - 10% do not require explanation.

Large changes of more than 5 mmbbls always require explanation.

Sales Gas estimates

Small changes of less 0.5 bcf that result in a + or - 10% do not require explanation.

Large changes of more than 25 bcf always require explanation.

Does reserves estimate include EOR? Yes
 No

Which classification(s) include EOR volumes? Please specify estimated volume of reserves associated with EOR for each classification which included EOR volumes.

EOR

Does contingent resources estimate include EOR? Yes No

Which classification(s) include EOR volumes? Please specify estimated volume of contingent resources associated with EOR for each classification which included EOR volumes.

1C mmmo

2C mmmo

3C mmmo

EOR type

Contingent resources

Current year

Contingent resources are those quantities of petroleum estimated to be potentially recoverable from known accumulations, but the applied project(s) are not yet considered mature enough for commercial development. Includes future planned developments where development plans are under discussion that have not been approved, and incremental projects in producing fields.

Resource confidence levels

1C Resource volumes that on the available evidence, are virtually certain to be technically producible, i.e. have a better than 90% chance of being producible

2C Resource volumes that are not yet 1C, but which are estimated to have a better than 50% chance of being technically producible

3C Resource volumes that at present cannot be regarded as 2C, but which are estimated to have a significant - more than 10% but less than 50% - chance of being technically producible

Validation Dependence

Validation for this section is dependent on submission of the Activity section for the same reporting unit

You cannot submit until the dependent section has been submitted.

Activity Section Cross Check Validation

Data from the Activity section of the survey and Reserves & resources section should be consistent. To help achieve this, the Estimate 2C values are cross checked against the Base activity of the most recently submitted version of the Activity section. Where the Base activity has no non-zero Sales Volume data for a category there should be no non-zero data entered in the Reserves & resources section submission. The Estimate 2C is compared to the sales volume profile from 2021 to (Likely COP year)

If you selected Yes to 'Does reserves estimate include EOR?' then you must answer additional questions.

Checklist

Below are the some of the detailed QC steps that each section will go through. If you think your data will not pass these checks, please add as much information in the general comments section as possible to help us understand why.

- check fluid type and depletion mechanism match our understanding of the FDP
- check any changes to STOIP and GIIP are credible and explanations for changes over 10% are understandable
- check any changes to reserves and cumulative production are credible and explanations for changes over 10% are understandable
- check EOR reserves/resources numbers are provided where expected
- check any changes to Contingent Resources are credible and explanations for changes over 10% are understandable
- check median line fields are reporting UK Share rather than gross
